

The Lung Center

AT GRAND VIEW HEALTH

About Us

The Lung Center at Grand View Health offers a multidisciplinary approach to care for patients with lung abnormalities and all aspects of central airway obstruction due to benign and malignant diseases. We strive to provide patients with outstanding care in a unique approach.

The evaluation and management of lung cancer is complex and often involves intensive multi-modality therapies. We evaluate, diagnose and treat patients with multiple lung conditions using a team approach including members of Interventional Pulmonology, Surgery, Medical Oncology and Radiation Oncology.

We are able to intervene using the most advanced technologies to diagnose and treat lung abnormalities, such as the superDimension ENB and EBUS. Dr. Maouelainin is the only fellowship-trained interventional pulmonologist in Bucks and Montgomery counties.

Conditions Treated

- Lung Nodule Management
- Lung Cancer
- Mediastinal Adenopathy
- Pleural Disease
- Cystic Fibrosis
- Pneumonia
