

About our Practice

Infectious disease specialists are board-certified physicians who specialize in the identification and treatment of a variety of illnesses caused by bacteria, fungi, viruses and parasites.

While common infections are treated by primary care physicians, more complex conditions such as; HIV, Lyme Disease, MRSA, complicated infections of the skin and bone, infections of the heart valves, and fevers of unknown origin are referred to ID specialists. We work closely with referring physicians to determine appropriate diagnostic tests and individualized treatment plans.

Travel Medicine & Immunization Services

We specialize in CDC-recommended travel vaccines, health warnings and advice about international travel. In addition, we evaluate and manage post-travel illnesses. Please note some travel immunizations require a series of injections over a period of several weeks. We encourage you to make your appointment six to eight weeks prior to your departure to ensure full protection.

As a member of Grand View Health, our practice provides you and your family with access to trusted care, experience and commitment to quality. With the Grand View network, you and your family have access to hundreds of primary and specialty physicians.

Our Services

- Diagnosis and treatment of complex infectious diseases
- Travel Medicine & Immunization Services
