

THE BIRTH & FAMILY CENTER AT GRAND VIEW HEALTH Lactation Consultants

Give Your Baby the Best Start

The joyful closeness and bonding with your baby is just one of the many benefits of breastfeeding. Breast milk not only provides all the nutrients your baby needs for healthy growth and development, but it also contains antibodies, cells and hormones that protect babies from illnesses and chronic conditions. While breastfeeding is natural, it's not always easy. Our lactation specialists provide you with the support you need to successfully feed your baby as you establish a nursing routine.

About Our Lactation Consultants

At The Birth & Family Center at Grand View Health, our International Board Certified Lactation Consultants (IBCLC) provide high quality lactation care and services to mothers and infants. IBCLCs are highly trained professionals who help moms establish and sustain breastfeeding, even complex or high-risk situations.

Breastfeeding Support Following Delivery

After your baby's delivery, one of our lactation consultants will visit and observe you and your baby during your hospital stay. Their goal is to understand your personal breastfeeding needs and address any questions or concerns you have to help ensure breastfeeding success. They will show you various positions for optimal latching, feeding and burping, and teach you how to recognize your baby's hunger cues and feeding habits. Our IBCLCs are staffed seven days a week, including most late evenings.

Classes and Support Groups

Grand View Health offers additional ways to help you learn about breastfeeding before and after the birth of your baby through a breastfeeding class and support group. Led by Board Certified Lactation Consultants, each offers the opportunity for education beforehand and assistance after delivery. Learn more or register at gvh.org/classes-events.
